Department of Computer Science

(AUTOMOBILE HUB)

SUBMITTED BY:

Name of Student:-

Nikam Nikhil Kailas (Div-B, Roll No-45)

K K Wagh Education Society's
K. K. Wagh Arts Commerce, Science, & Computer Science College
Saraswati Nagar, Nashik-422003

Department of Computer Science

Certificate

This is certified that the student Nikhil Kailas Nikam Seat No 7001 has successfully
completed their project on topic **AUTOMOBILE HUB** as
fulfillment of B.Sc. (Computer Science) for the academic year 2024 -2025.

Asst.Prof P.S.Malani
Project Guide

Dr.A.H.Bendale

Internal Examiner

External Examiner

ACKNOWLEDGEMENT

We own our sincere gratitude to all those people who have given us their constant support and encouragement without which our project report would not have reached this stage.

We would like to express our thanks to **Asst.Prof P.S.Malani** For his/her advice and encouragement. She has been pillar of strength right through the project till the preparation of this report and helped by boosting moral, so we could surmount the difficulties that came across during completion of this project.

We would like to express our gratitude to **Dr. S. V. Patil**, Principal, K. K. Wagh Arts, commerce, science and Computer Science College. And **Dr.A.H.Bendale** Head of Computer department for the support and the infrastructure they have provide, so that we could successfully complete the project on time.

Last but not the list we would like to express our sincere thanks to all staff members and our friends for their help and cooperation in all phases of the project.

PROBLEM DEFINATION

- The automotive industry is experiencing rapid growth and diversification, with increasing customer expectations for comprehensive and convenient services. Customers often face challenges finding reliable and integrated solutions for their various car-related needs,
- from purchasing a new vehicle to maintaining and customizing their existing one. Existing service providers often specialize in only one or two areas, forcing customers to interact with multiple entities, leading to inconvenience, fragmented experiences, and potentially higher costs.
- Furthermore, the rise of electric vehicles (EVs) introduces new service requirements, such as specialized charging infrastructure and maintenance.
- Customization Difficulties: Finding reliable and reputable customization services can be challenging
- Limited Accessibility: Access to reliable and timely support, especially in emergencies, is often lacking

EXISTING SYSTEM

The existing system for automobile services is characterized by:

- Independent Service Providers: Dealerships, independent garages, insurance companies, and parts suppliers operate independently.
- Traditional Methods: Many transactions and service requests are conducted through phone calls, in-person visits, and paper-based processes.
- Limited Online Presence: While some providers have websites, they often lack comprehensive functionality and integration.
- EV Charging Dispersal: EV charging stations may exist, but lack a central way to locate and utilize them

PROPOSED SYSTEM

The proposed system is a comprehensive online platform that integrates all essential automobile services. Key features include:

- Vehicle Purchase: Online platform for browsing and purchasing new and used vehicles, with financing options.
- Maintenance and Repair: Online scheduling, service history tracking, and transparent pricing for maintenance and repair services.
- Vehicle Parts: Online catalog and purchasing of genuine and aftermarket vehicle parts.
- EV Charging Station Locator and Booking: Real-time map and availability information for EV charging stations, with online booking and payment.
- Customization: Online platform for browsing and booking customization services from reputable providers.
- Insurance: Online comparison and purchase of vehicle insurance policies.
- 24/7 Support: Integrated customer support through chat, phone, and email.
- User Profiles: Personalized profiles to store vehicle information, service history, and preferences.

REQUIREMENT ANALYSIS

- Hardware Specification: -
 - Processor: AMD Ryzen 5
 - RAM: 8.00 GB.
- Operating System: -
 - platform: Windows 10/11.
- Software Requirement: -
 - Front end tool: XAMPP server
 - Back-end tool: MySQL
- Programming language: -
 - HTML, CSS, JS, PHP.

SCOPE OF SYSTEM

The scope of the system includes:

- Development of a web-based and mobile-friendly platform.
- Integration with existing service providers and parts suppliers.
- Development of a robust database to store vehicle and customer information.
- Implementation of a mapping and location service for EV charging stations.
- The system will serve individual vehicle owners.

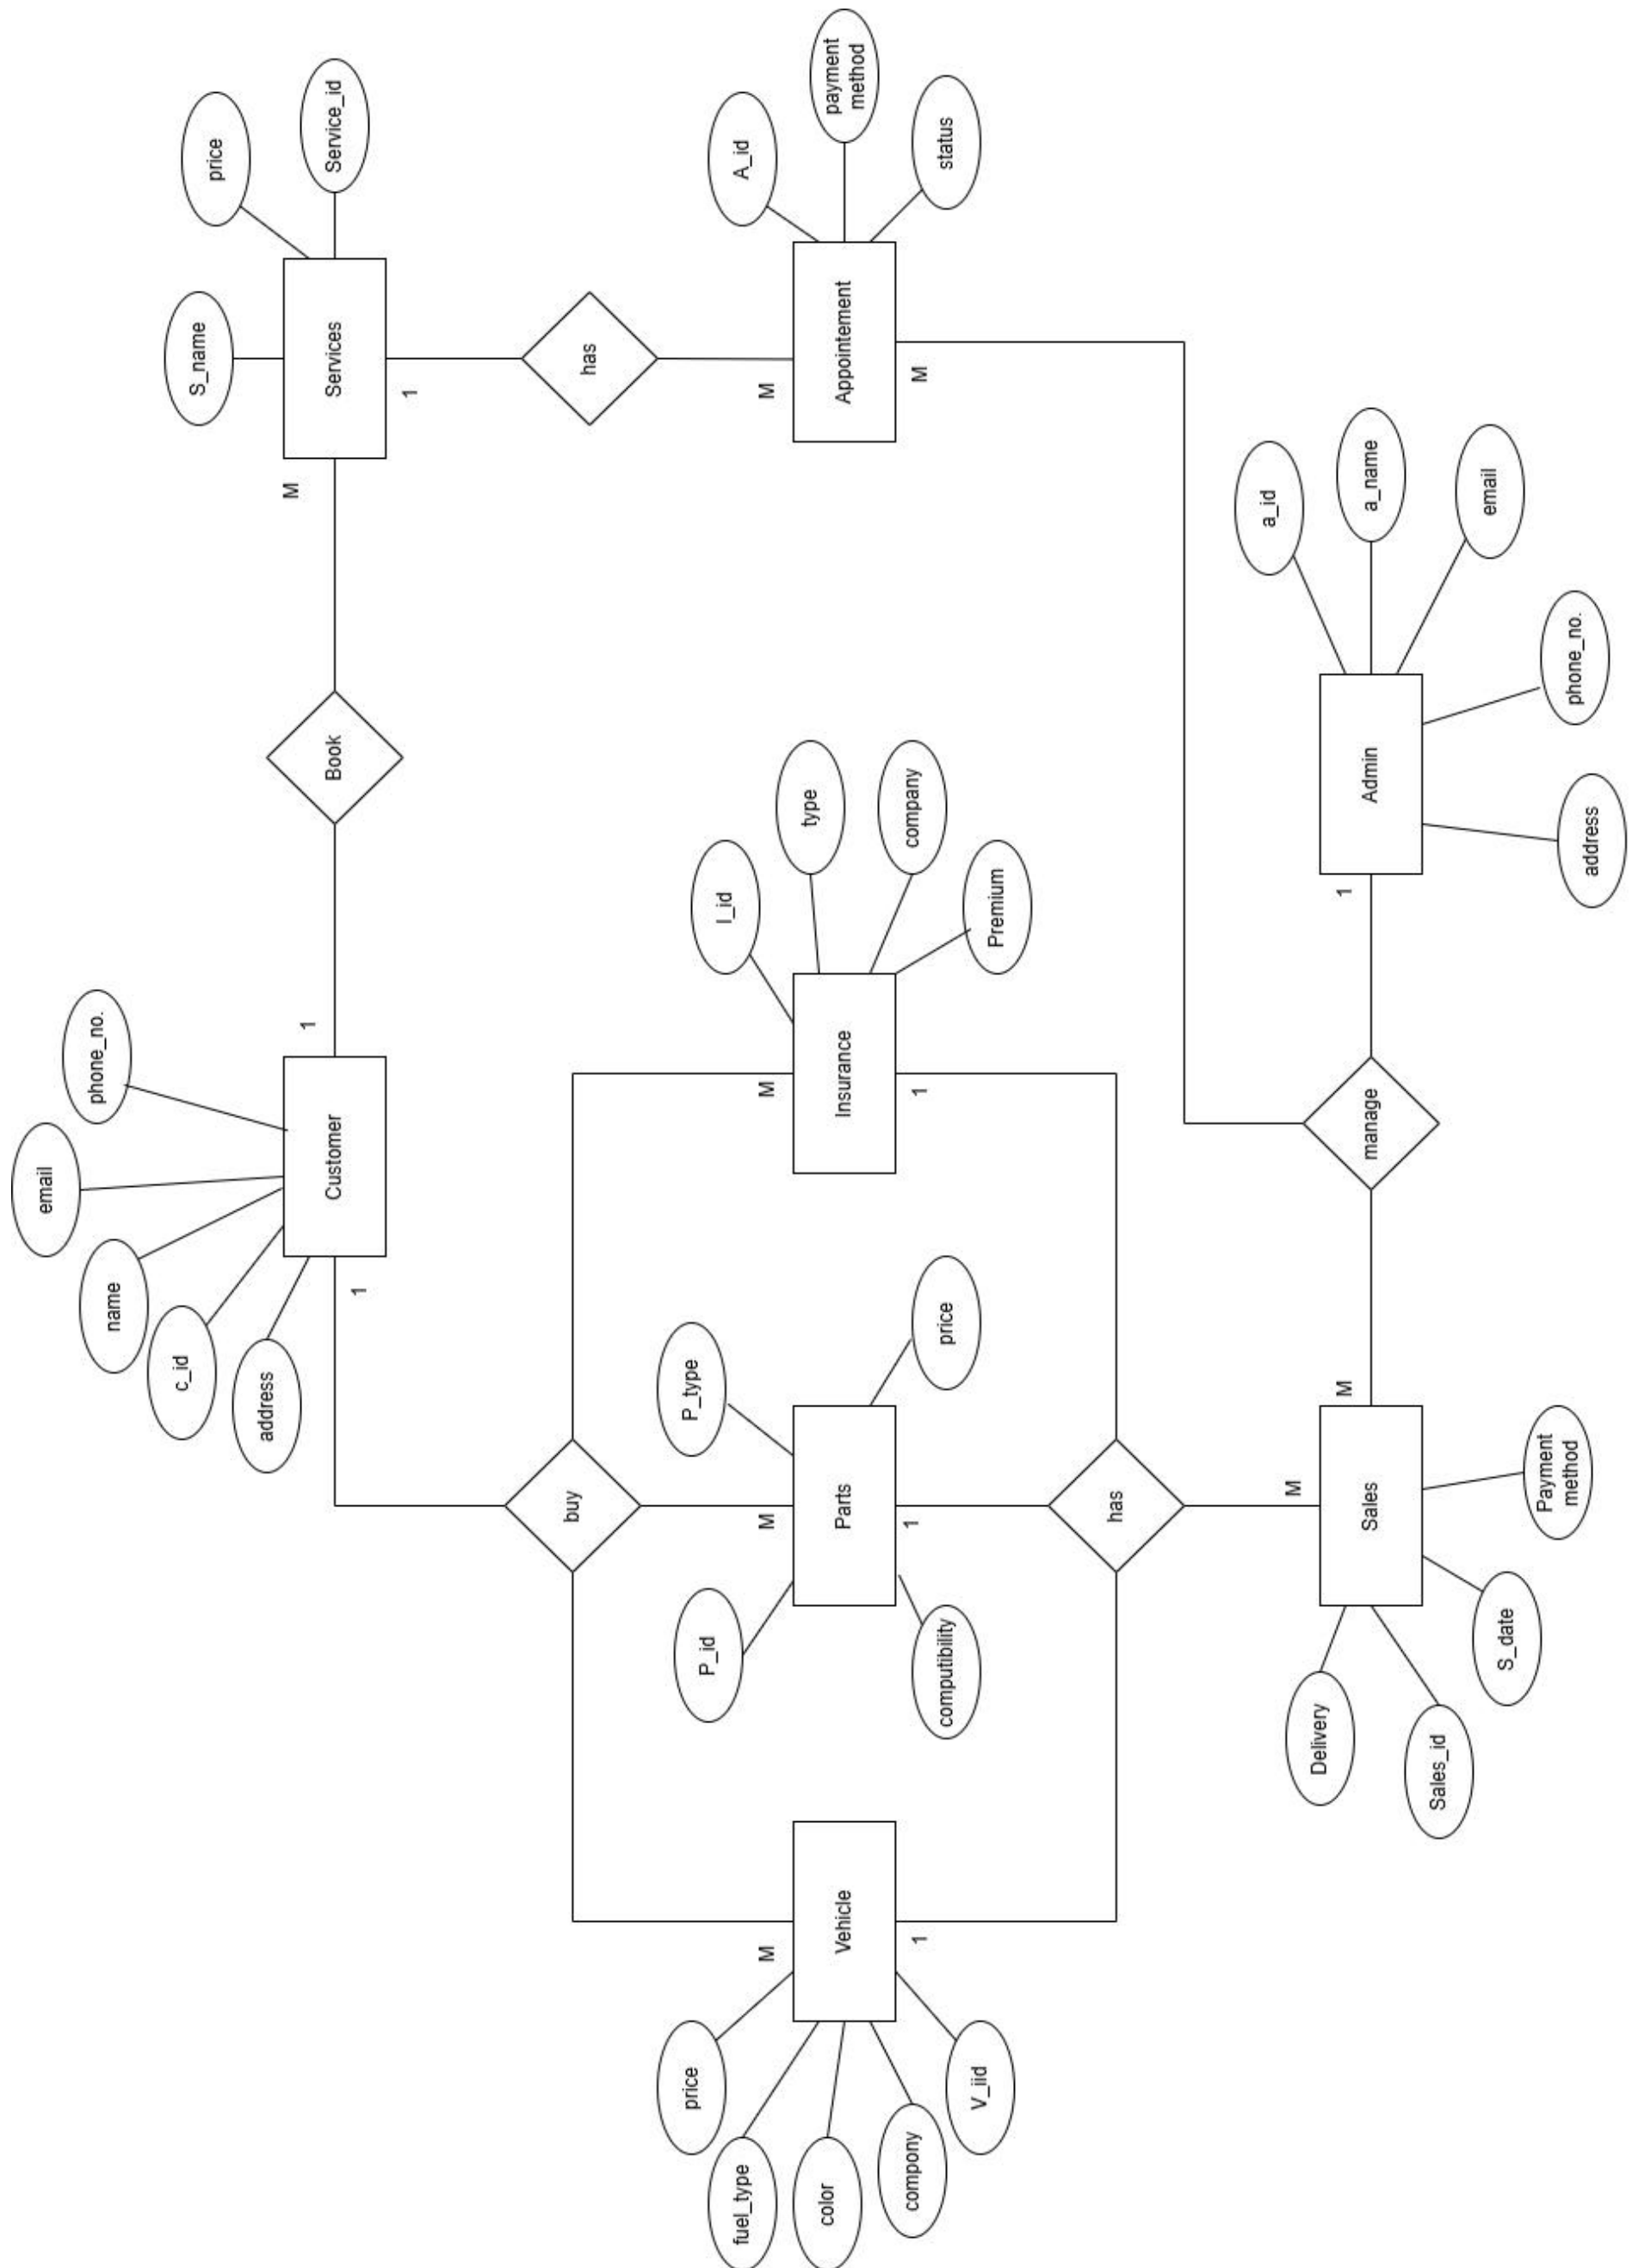

FEASIBILITY STUDY

- • Technical Feasibility: The required technologies (web development, database management, mobile app development) are readily available and mature.
- Economic Feasibility: The platform can generate revenue through service fees, commissions, and partnerships with service providers. Reduced customer acquisition costs for service providers utilizing the platform will also create value.
- Operational Feasibility: The platform can be operated and maintained by a dedicated team with appropriate technical and customer service skills.
- Legal Feasibility: All legal requirements regarding data privacy, online transactions, and consumer protection will be adhered to.

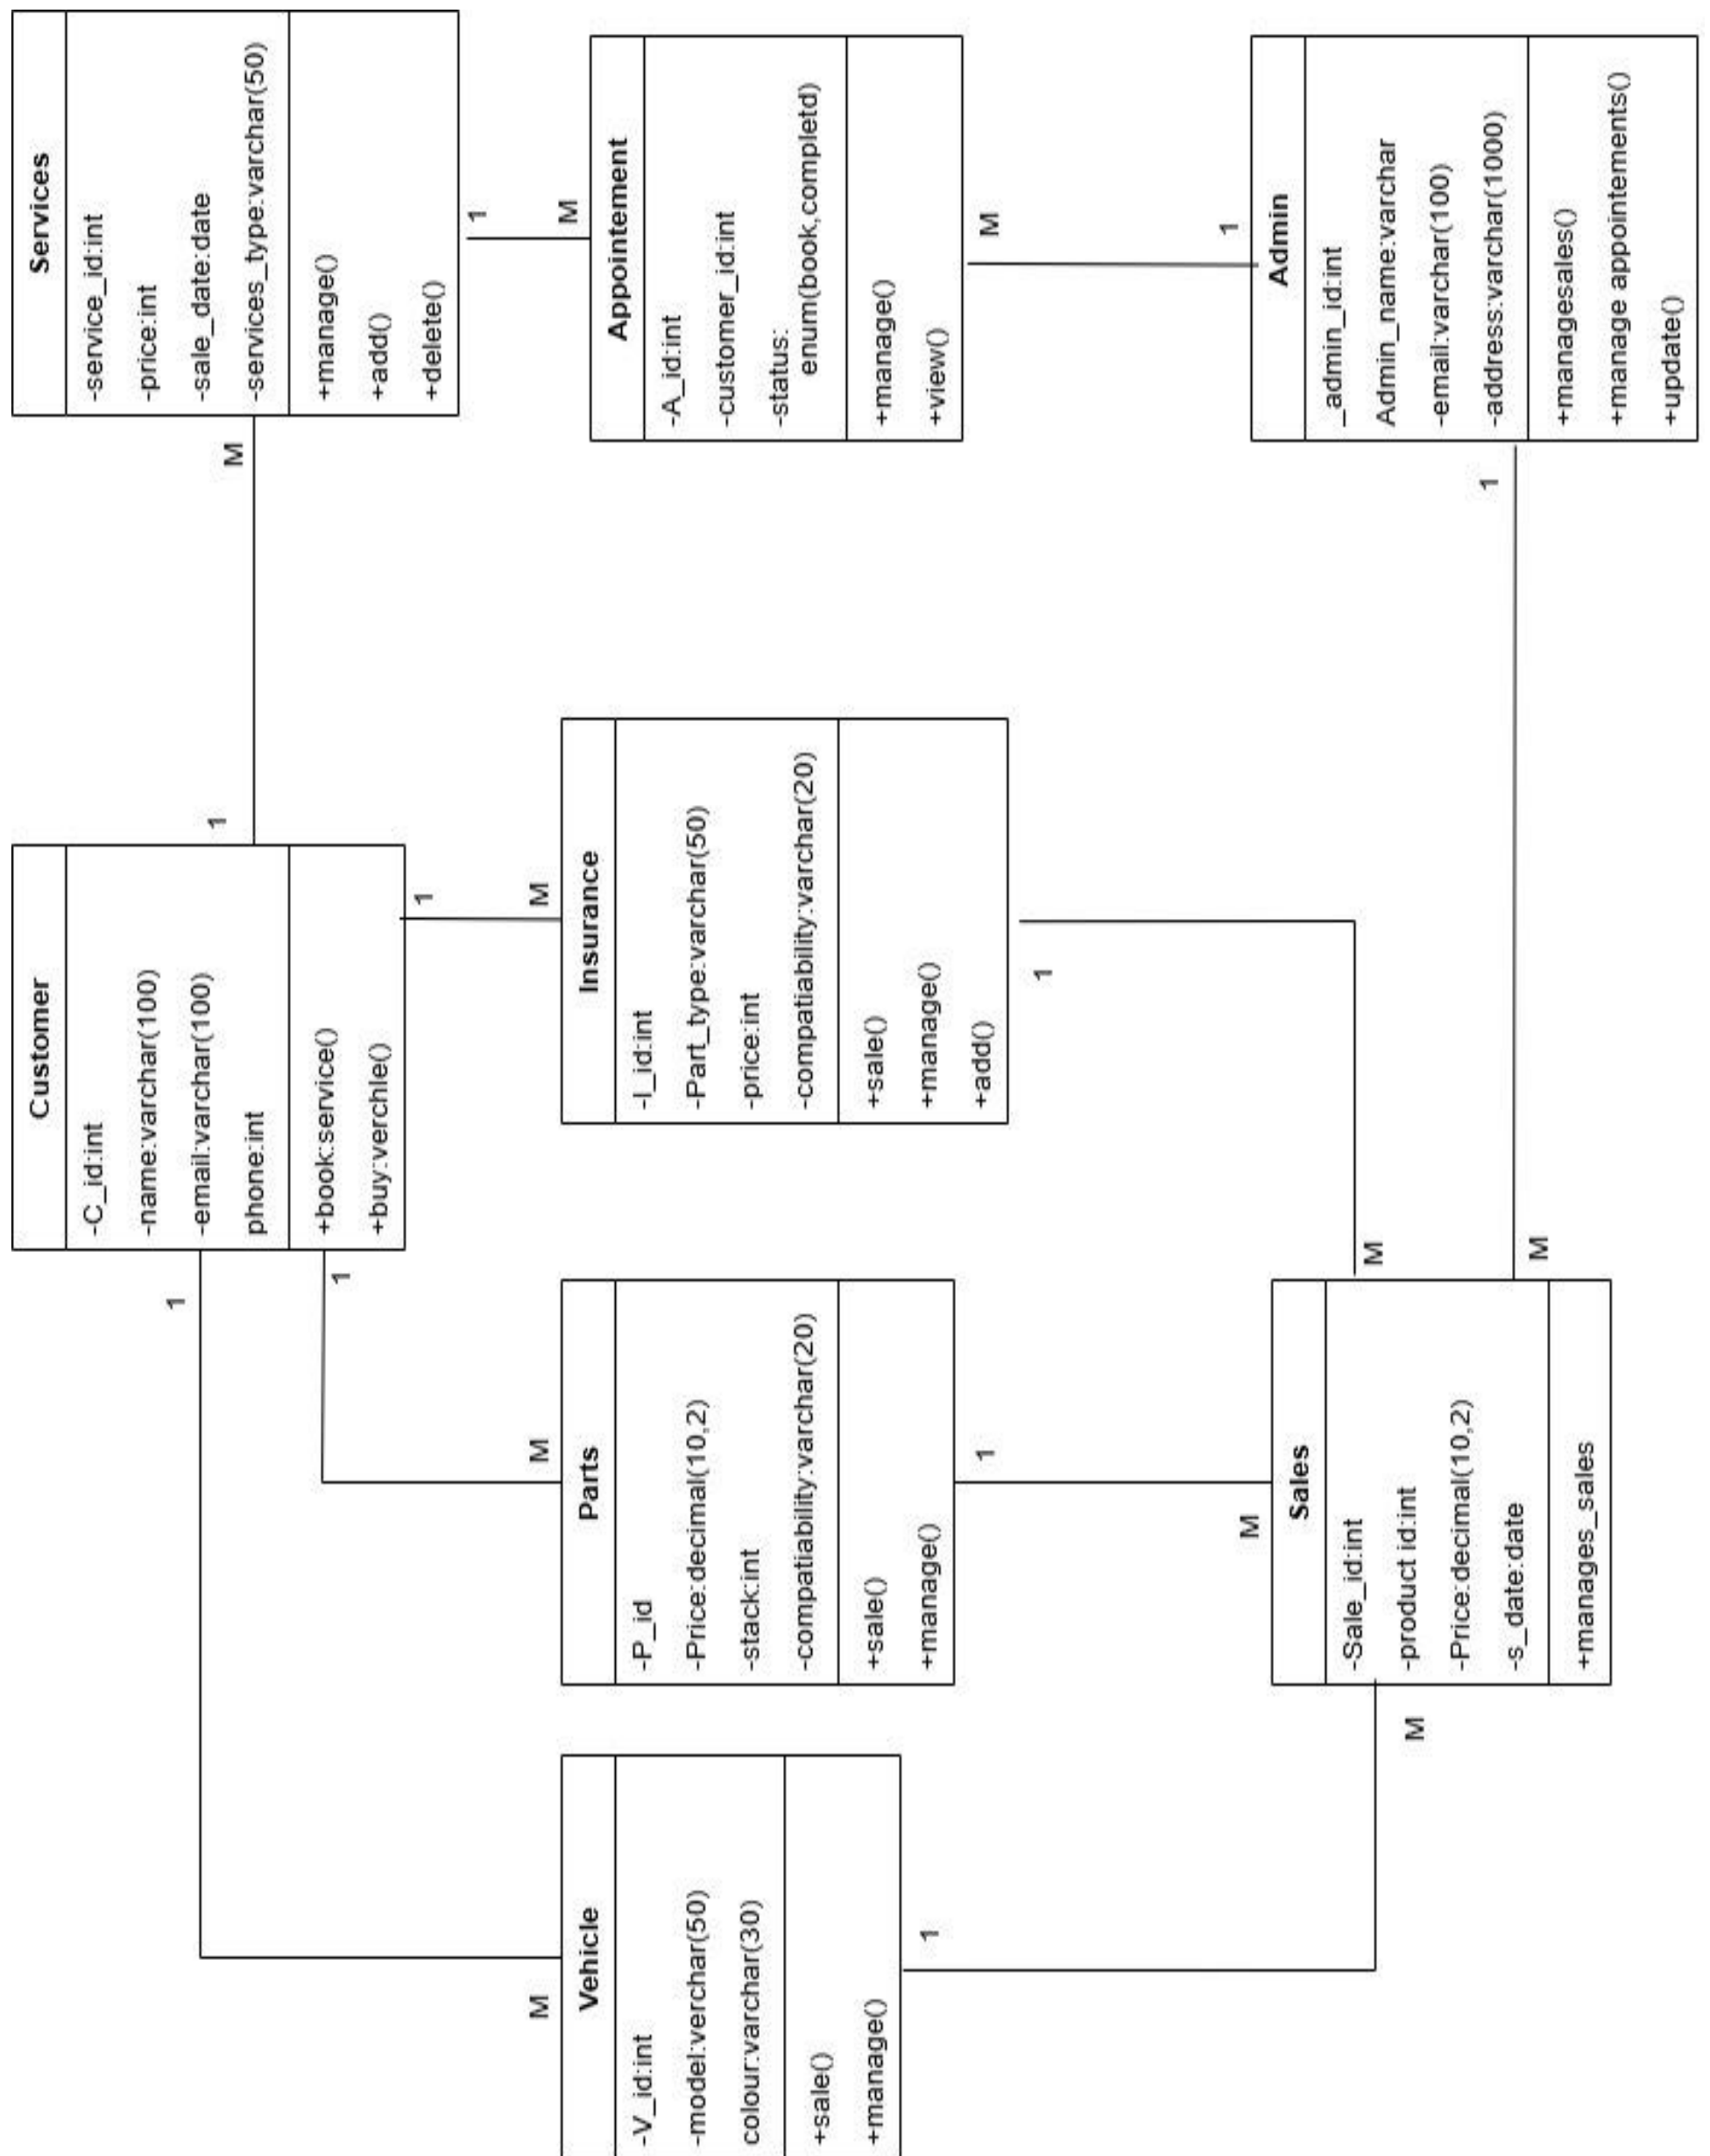

H/W & S/W Requirements

- Hardware : -
 - Processor: Intel i3
 - RAM: 8.00 GB.
- Software : -
 - Front end tool: XAMPP server
 - Back-end tool: MySQL

Conclusion

The proposed integrated automobile service platform addresses the existing challenges faced by vehicle owners by providing a convenient, transparent, and comprehensive solution. By consolidating essential services and leveraging technology, the platform can enhance customer satisfaction and streamline the automotive service industry.

The proposed integrated automobile service platform addresses the existing challenges faced by vehicle owners by providing a convenient, transparent, and comprehensive solution. By consolidating essential services and leveraging technology, the platform can enhance customer satisfaction and streamline the automotive service industry.

Future Enhancement

AI-Powered Diagnostics: Implement AI-powered diagnostics to predict potential vehicle issues and recommend proactive maintenance.

- Telematics Integration: Integrate with vehicle telematics systems to provide realtime vehicle health monitoring and remote diagnostics.
- Augmented Reality (AR) Assistance: Develop AR-based tools to assist users with basic maintenance and troubleshooting.
- Loyalty Programs: Implement loyalty programs to reward repeat customers and encourage engagement.
- Expansion of Service Network: Expand the network of service providers and EV charging stations to increase coverage and accessibility.
- Integration of ride sharing and car rental services.
- Voice activated control.
- Predictive Maintenance: Utilize machine learning to analyze vehicle data and predict maintenance needs before they arise.
- Integration of traffic and weather data: To help users plan service appointments.
- Expansion of EV charging network with dynamic pricing.
